### **Project Finance**

GE Capital Global Energy assists clients to achieve specific finance and accounting objectives in a tax efficient manner through the creation of non-recourse, asset based equity and debt investments supported by supply and off-take contracts.

We apply project finance techniques to finance the acquisition or ownership of energy assets. Structures are customized to the specific asset or assets under question

Partnerships, leases, common and preferred equity structures can be applied to customize efficient project financings which typically are off-balance sheet for our clients.

In certain circumstances, and depending in part on the client's tax profile, a project financing may result in the client achieving a lower financing rate than its afternative borrowing rate.

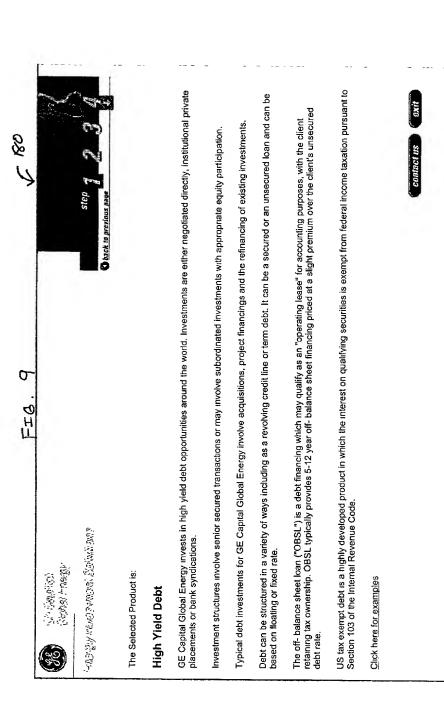

The client may be concerned about credit implications and/or S&P or Moodys' debt ratings and is therefore interested in off-balance sheet accounting treatment to improve leverage and ROA.

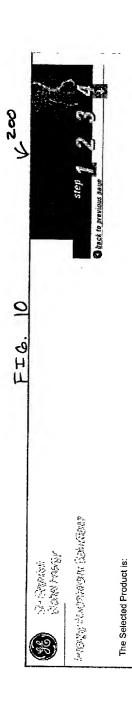

Project finance may allow the client to achieve greater leverage and/or term than is otherwise available or reduce impact of restrictive covenants on remaining business.

Leasing Product

GE Capital Global Energy is highly experienced in all forms of lease investing.

In the United States, we typically structure leveraged leases or single investor leases. We also structure cross-border lease transactions, and structures which assist clients to monetize assets already on balance sheet through a sale and leaseback to the owner.

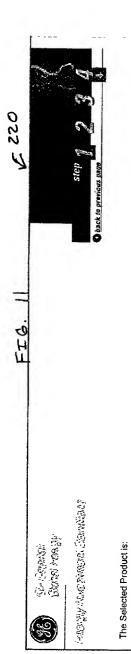

Leasing may be an option if the client is concerned about credit implications and/or S&P or Moodys' debt ratings and is therefore interested in off-balance sheet accounting treatment to improve leverage and ROA.

Single Investor Lease ("SIL") and Leveraged Leases ("LL") are tax advantaged, asset based financings which typically qualify as "operating leases" for accounting and "true leases" for tax purposes. Depending on the client's tax position, the SIL and LL can provide 7-30 years off-balance sheet financing priced well below the client's alternative borrowing rate.

# Project Common Equity

GE Capital Global Energy invests common equity in a variety of transactions, including project financings and limited partnerships.

Typically, these structures allow our client to achieve balance sheet objectives in a tax efficient manner

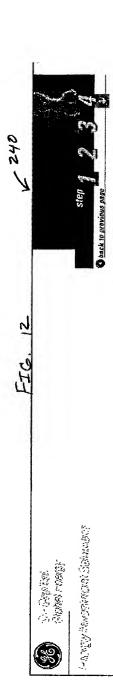

Common equity investments can be structured for single assets.

If you would like to get a preliminary estimate of the value of the equity in your quasi-merchant power plant, please use our project equity valuation calculator below. A quasi-merchant power plant is one which is fully or partially supported by supply and off-take contracts.

The Selected Product is.

## Limited Partnership

Our Limited Partnerships are extremely flexible, and are suitable for project financings, deconsolidations, acquisitions and refinancings or monetizations of existing assets. They can be asset-based, non-recourse and/or off-balance sheet to meet client objectives.

Limited Partnership financing is an efficient vehicle as it may permit returns to be earned through accounting benefits and cash distributions in a tax efficient manner.

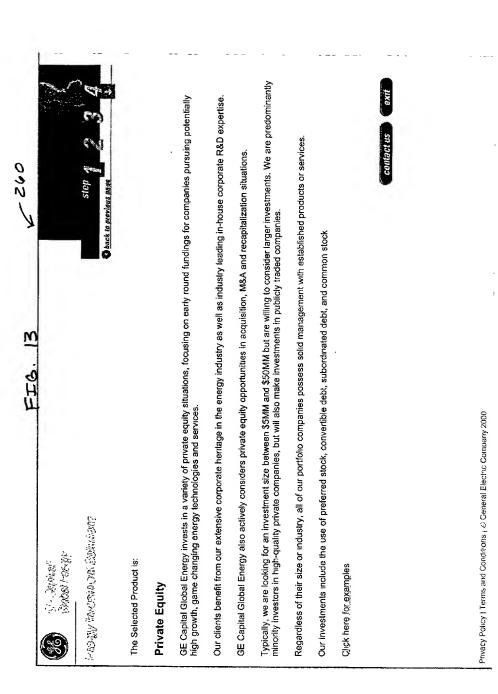

Depending on the assets and ownership it may be possible to record an accounting gain without such gain being subject to current income tax.

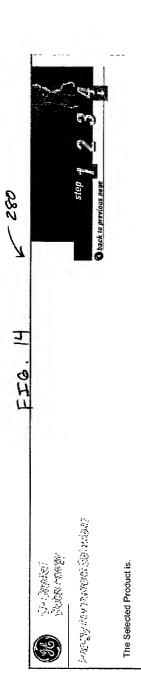

GE Capital Global Energy invests through limited partner equity or preferred limited partner equity, with distributions geared to targeted rates of return. Ownership interests also can be structured to duration of term and residual value.

GE Capital Global Energy is willing to discuss a reduced return after-tax and a smaller residual position/ upside sharing position in exchange for preference in cash distributions to the other partner(s) and a fixed and determinable payment stream to allow us to account for the investment as a receivable.

Privacy Policy | Terms and Conditions | @ General Electric Company 2000

GE Capital Global Energy invests preferred equity in a variety of transactions, including private equity and 144A offerings.

**Preferred Equity** 

Preferred equity investments structured by GE Capital Global Energy are applicable in project financings, acquisitions and refinancing / monetizations, and may include a variety of balance sheet benefits.

Preferred equity is a financing which is senior to common equity stockholders and junior to all lenders and trade creditors. It is debt-like in terms of providing a fixed rate of return to the preferred equity purchaser and generally containing a redemption mechanism. Click on the link below for descriptions of other structures.

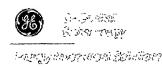

Depending on the structure, a portion or all of an investment may be treated as equity by the regulatory agencies and rating agencies.
